

||

Mum still won't use a smartphone. But she talks to Kai every morning — and he reminds her to take her walk.

— ANNA R., DAUGHTER & CARER

Kai 9

KINDRED AI · BUILT IN THE UK

1 in 3

people over 65 in the UK live alone. Half say they go a week without a meaningful conversation.

Old age shouldn't mean losing your independence.

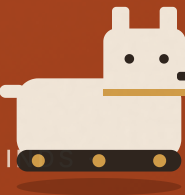

Kai 9 is a small, friendly robot designed to live alongside an older adult — keeping their floors clean, their phone within reach, and their day quietly in motion. Not a gadget. A companion.

WHAT KAI 9 DOES

Seven small kindnesses, every day.

Each function was designed with one question in mind: *does this give the user back a piece of their day?*

-  **Vacuums the floor**
Quiet, autonomous cleaning — no more pushing a heavy upright around the lounge.
-  **Prompts gentle activity**
A nudge to stretch, a walk to the kettle — never nagging, always optional.
-  **Reads WhatsApp aloud**
Hear from the grandkids without squinting at a screen. Reply by voice.
-  **Plays radio, music & podcasts**
"Kai, put The Archers on." That's it. That's the interface.
-  **Checks in on you**
If something doesn't seem right, Kai quietly contacts your chosen family member.
-  **Returns to charge himself**
No plugs, no fuss. When tired, Kai goes back to his bed.
-  **Privacy by design**
Voice processed locally. No cloud microphones. No data sold. Ever.

A DAY WITH KAI

Quietly there, when you *need him.*

- 7:42** "Morning, love." Kai reads out a message from your son in Sydney. You dictate a reply — he sends it.
- 10:15** Tidy-up time. Kai sets off across the kitchen on his tracks, hoovering quietly while you read the paper.
- 12:30** "Fancy a stretch?" A gentle prompt to stand up and move — five minutes, no pressure.
- 15:00** The Archers, on cue. "Kai, play Radio 4." He does. You doze off in the armchair.
- 18:20** Still no movement? Kai checks in. You answer. All is well. He goes back to his corner.
- 22:00** "Night, Kai." He returns to his charging bed. Tomorrow, he does it all again.

WHY KAI 9 — AND WHY NOW

A £30bn market that's *asking for this.*

The UK's over-65 population will reach 17 million by 2040. Existing solutions are either cold (medical alarms) or impractical (smartphone apps). Kai 9 sits in the missing middle — useful, warm, and dignified.

- Three products in one**
Robot vacuum, voice assistant, and wellbeing monitor. One device, one purchase, one set-up.
- Built on IBM Granite AI**
Enterprise-grade language model running on-device. Trusted, auditable, private.
- Designed with dignity**
Never patronising. Never infantilising. A companion, not a carer.

Invest in a kinder kind of independence.
